

LiteMirror

LiteMirror Consecutive Installation Instructions

Follow these steps to properly install your mirror panels using the provided cleats, brackets, and magnets:

1. Attaching the Cleats:

- The mirror panels come with 6-inch cleats pre-installed on the top two corners (see Picture 1).
- Use the enclosed cleats to mount to the wall. Attach each cleat to the wall using only 2 screws (see Picture 2).

2. Securing the Bottom Brackets:

- Secure the bottom brackets directly to the wall using only 1 screw per bracket. Do not overtighten.

3. Using the Magnet (if applicable):

- If using the provided magnet, secure a screw through the hole in the magnet. The bracket will click and hold in place.

4. Installing Consecutive Mirrors:

- If you are installing multiple mirrors consecutively, share the inside corners of each mirror with one wall cleat (see Picture 3).
- Be careful not to overtighten the screws. Overtightening can cause the mirrors to distort or twist, leading to damage.

5. Positioning the Wall Bracket:

- Mount the wall bracket 1 5/8 inches below where the top of the mirror will be hung.

By following these steps, you can securely and correctly install your mirror panels without causing damage.
